Python Programming Level: Functions

DATA SCIENCE

PRACTICE QUESTIONS - 03

Functions QUESTIONS

Exercise 1: Create a function in Python

Exercise 2: Create a function with variable length of arguments

Exercise 3: Return multiple values from a function

Exercise 4: Create a function with a default argument

Exercise 5: Create an inner function

Exercise 6: Create a recursive function

Exercise 7: Assign a different name to function and call it through the new name

Exercise 8: Generate a Python list of all the even numbers between 4 to 30

Exercise 9: Find the largest item from list

Exercise 10: Call Function using both positional and keyword arguments

Exercise 11: Create a function with keyword arguments

Exercise 12: Modifies global variable

Exercise 13: Write a recursive function to calculate the factorial

Exercise 14: Create a lambda function that squares a given number

Exercise 15: Use a lambda with the filter() function to get all even numbers from a list
